

# **DNS-325**

## **PnP-X driver**

### **Uninstallation Guide**

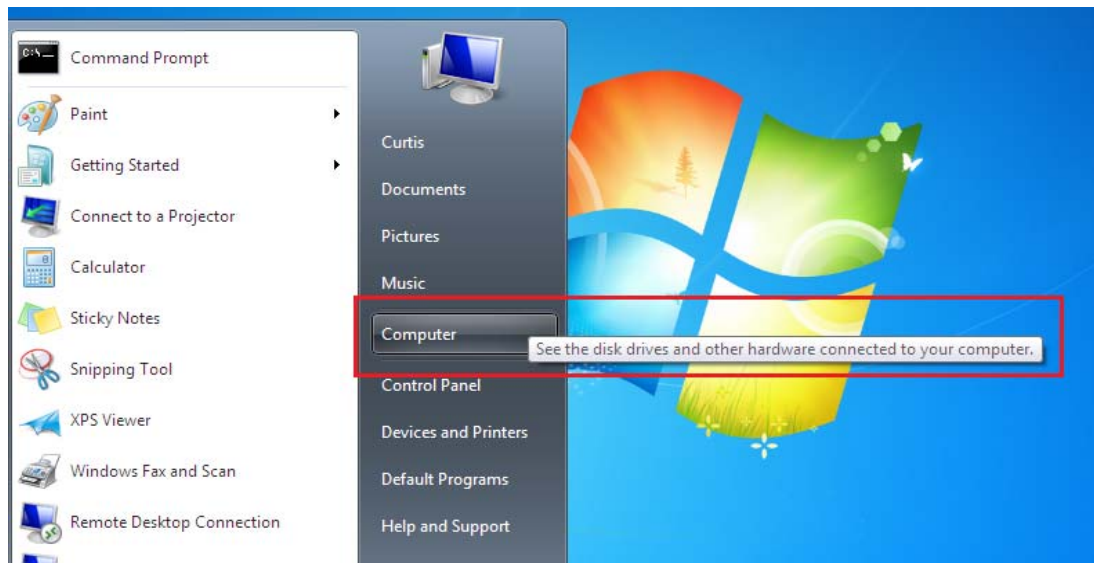

**D-Link<sup>®</sup>**

Building Networks for People

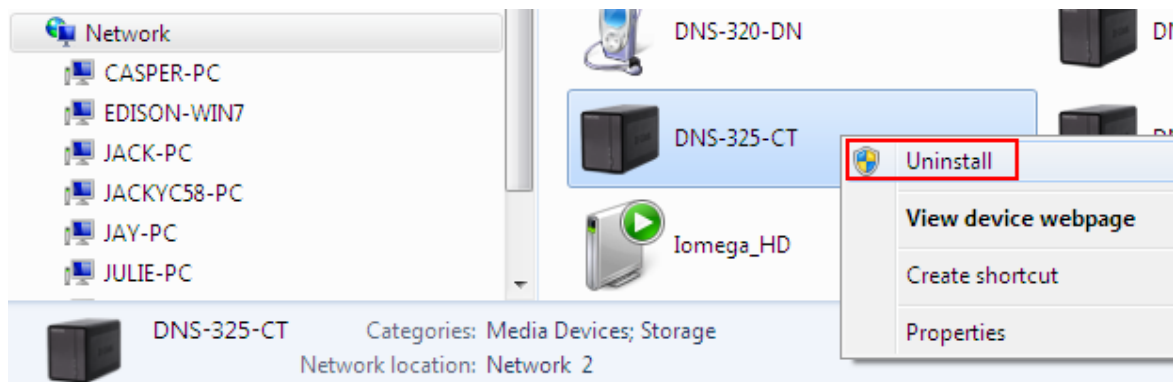

RECYCLABLE

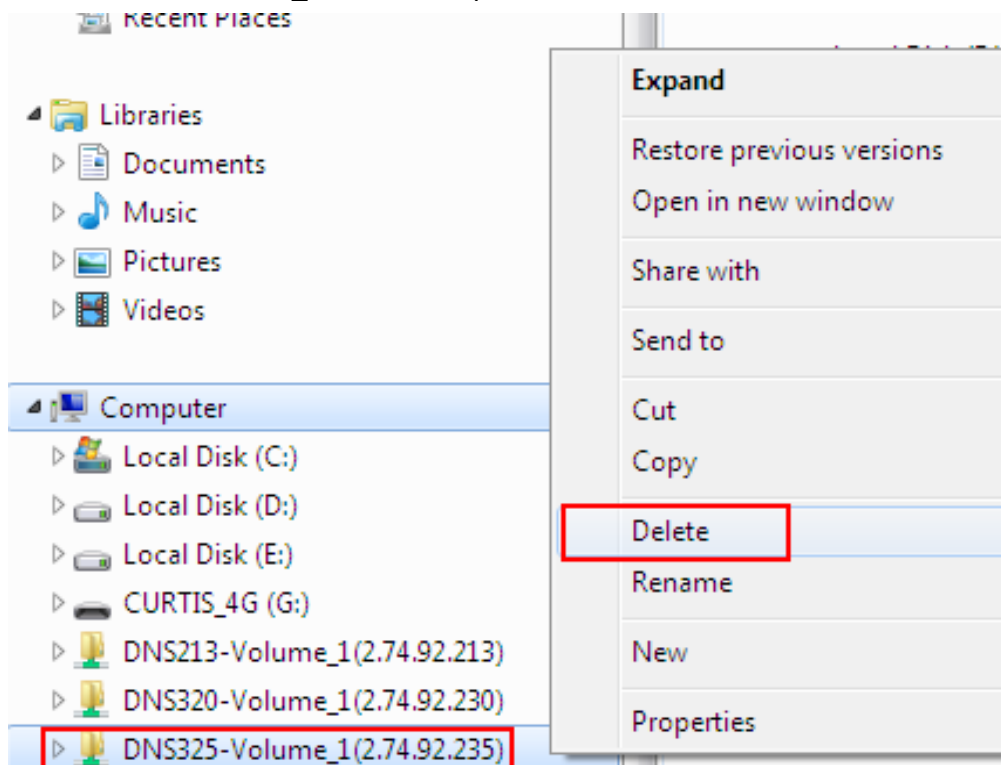

## 1. Select Computer.

## 2. Uninstall device in the Network.

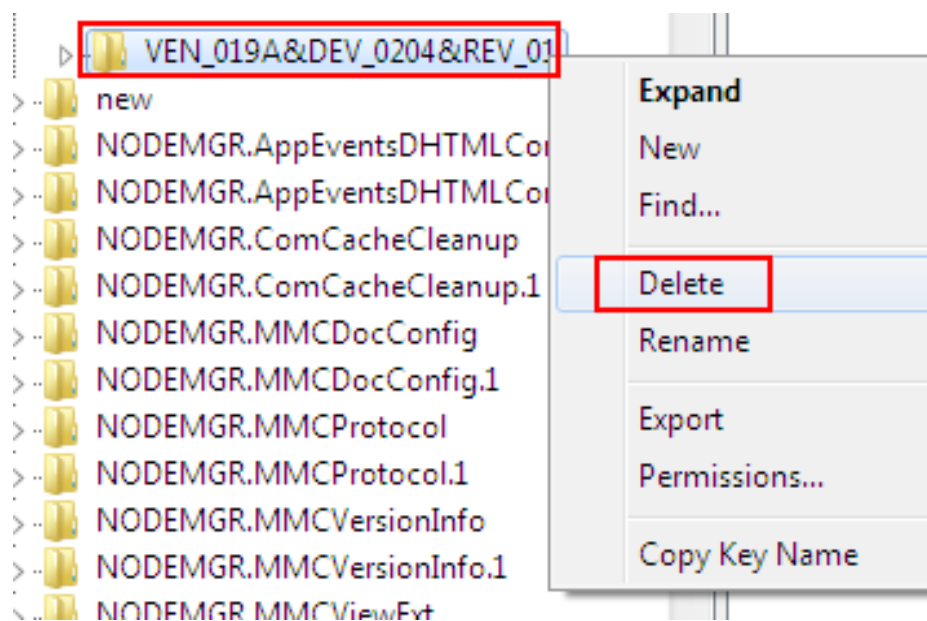

3. Delete DNS325-Volume\_1 in the Computer.

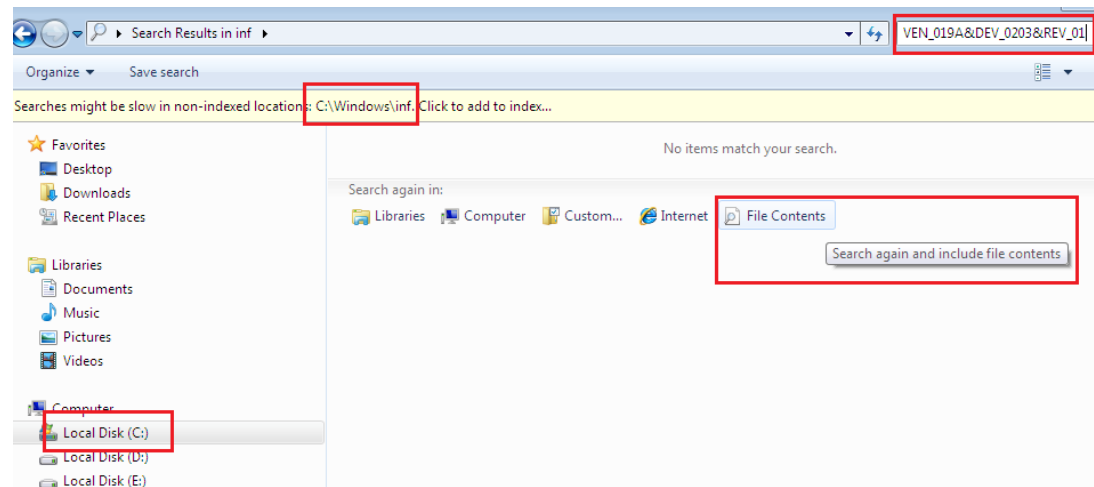

4. Execute regedit and delete this registry value:

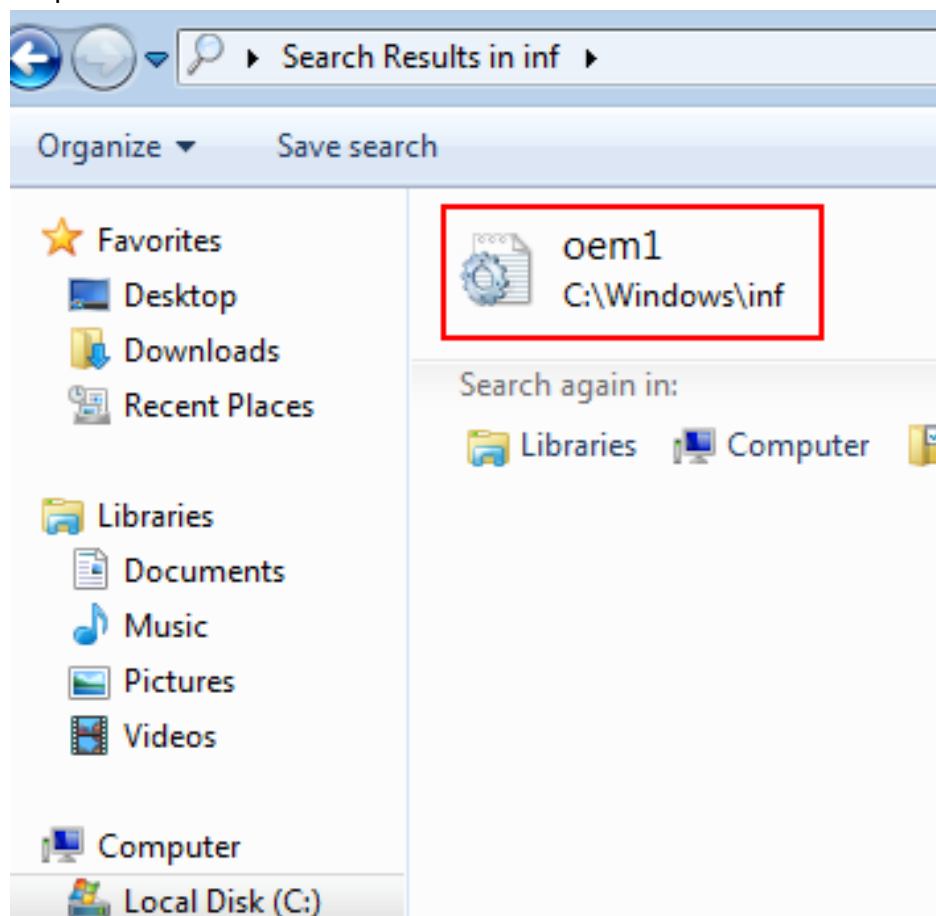

"HKEY\_CLASSES\_ROOT\NetworkExplorerPlugins\VEN\_019A&DEV\_0204&REV\_01"

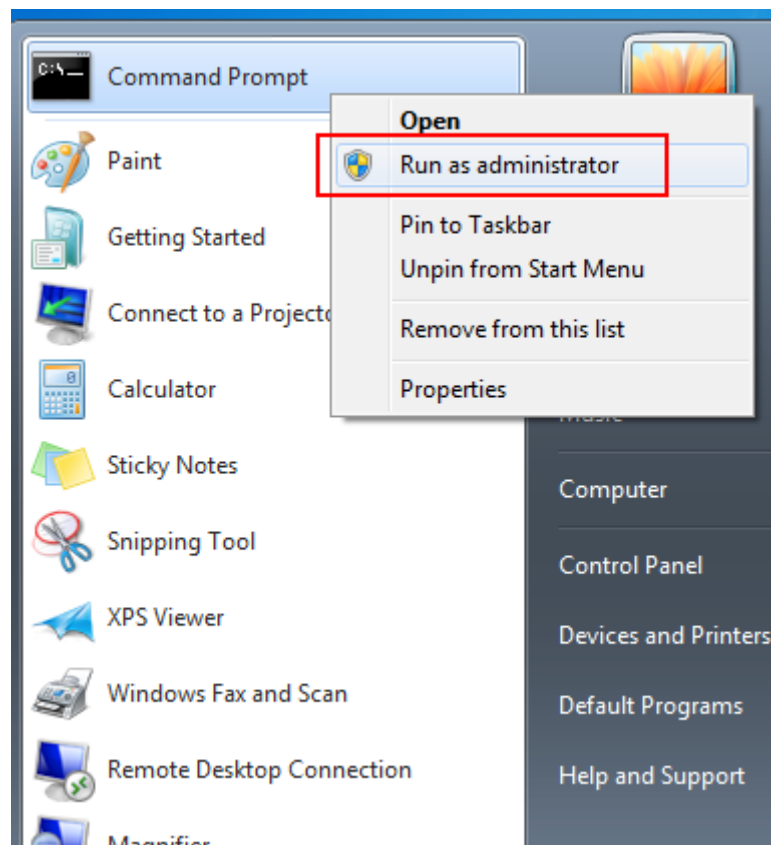

5. Search “**VEN\_019A&DEV\_0204&REV\_01**” in "C:\Windows\inf", first-run search would not find any match item and then search File Contents again.

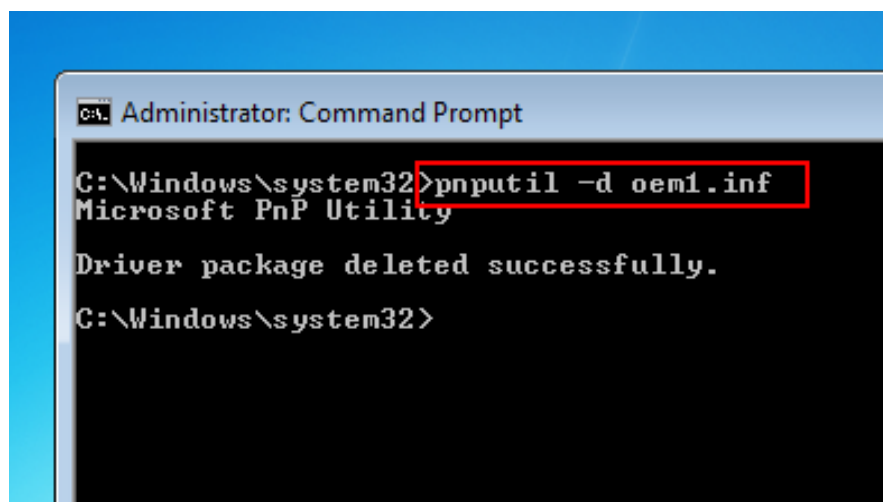

6. Please remember the file name of search outcome; the file name is oem1.inf in this sample.

7. Use the administrator mode to execute Command Prompt.

8. Execute "pnputil -d oem1.inf" (sample file). If file can't be deleted, please redo step.2 and execute "pnputil -f -d xxx.inf" .

9. Delete "Dns320Nascoins.dll" in the " C:\Windows\System32".
